

## Wireless Link Rental

The **MWEB Business Wireless** solutions are outdoor high-speed point-to-point offerings that enable customers in the coverage area to connect to the MWEB Data Centre via a wireless link, without a traditional telco line.

Wireless offerings provide customers with an alternative way to connect offices, branches and other locations to each other via the MWEB Data Centre, using a high-speed wireless link that is both cost-effective and fast to implement.

### Product features

MWEB's preferred wireless partners will install and configure hardware devices at the customer's premises to connect their business via a wireless link to the MWEB Data centre.

Site inspection and installation takes approximately two weeks (compared to anything up to six months for a telco line option). The technology acts as an ideal failover offering in that it requires no copper for installation, which means customers are not affected by copper theft.

Wireless Link Solutions are available in two flavours. Please note that none of the wireless options include bandwidth and this can be arranged at an additional charge by MWEB Business.

### **OPTION 1:**

#### **Amobia**

This offering utilises the unlicensed spectrum and is currently one of the most affordable packages available in this market. As with all unlicensed spectrum solutions, however, it may be prone to interference and is therefore a "best effort" service. Line speeds are offered in increments of 64K up to 2 048K.

### **OPTION 2:**

#### **Broadlink**

This solution provides wireless point to point service across a transmission network, within the ICASA licensed spectrum band. Broadlink guarantees 99,5% uptime and has an excellent service level agreement in place. Line speeds are offered in increments of 64K up to 2 048K.

### Product benefits

Ideally suited to customers who do not have ADSL or copper in their areas, and customers who require a failover from their primary link, the Wireless Link Rental solution includes a free site inspection and - provided you are in the coverage area - a one-year equipment warranty. The network is built on a fully redundant wireless backbone.

Our wireless solutions have a wide coverage in South Africa for more information call 011 340 8400.
