

SMALL BUSINESS SOLUTIONS – Shared Webhosting and Database Hosting

WHAT IS IT?

MWEB offers shared Webhosting services across both Unix/Linux and Microsoft platforms. Your website is hosted locally in a secure environment. This ensures that your website downloads faster, and is protected from unauthorized access from would be hackers. Our Webhosting packages now offer more space and also allows more traffic to your website. Our packages start from as little as R29 per month offering you 150MB space and 1GB traffic.

WHY GET THIS?

Your website will be hosted with South Africa's leading independent Internet Service Provider. MWEB has over 11 years experience hosting over 8000 websites in our sophisticated data centers which support both Microsoft and Unix/Linux platforms and a wide range of applications. Our datacenters sit behind a secure firewall, updated with the latest technology and backed by uninterrupted power supply. Our highly skilled technical support staff are available 7 days a week 365 days a year.

In addition to this you will obtain a username and password, which will allow you to access our hosting servers to upload and make changes to your website at your leisure. You will also have access to web statistics, which provides you with a wealth of information relating to how successful your website is performing. Searching for a reliable webhost can be a daunting task, contact MWEB to guide you seamlessly.

WHAT SCRIPTS ARE SUPPORTED*

Depending on how your website is designed you would need one of the following scripts enabled. You would need to consult with your web developer to get this information. Should you require any scripts not listed below, please contact our Sales Team to confirm whether your requirement is supported.
