GLOSSARY

Spam - Spam or junk mail is unwanted or unsolicited e-mail that arrives in your mailbox. Typical spam includes messages about money-making schemes, offensive web sites, weight-loss programmes and more. MWEB filters out most spam before it even reaches your mailbox.

Viruses - Malicious software, often spread by e-mail, that can damage the data on your computer or degrade its performance. MWEB scans all incoming e-mail for viruses to help keep you safe. However, it's a good idea to use your own anti-virus software as well to protect your machine from any viruses that you may get from elsewhere.

Modem - A device for connecting to an Internet Service Provider using a telephone line.
